

EXIN BCS Business Analysis Foundation

3 Days (21 Hours) / Exam included

Our 3-day Foundation Programme in Business Analysis covers the fundamental knowledge required to perform the function of business analysis.

This includes the roles and competences required, as well as strategic analysis, business system, process modelling and business case development.

You will learn to identify and evaluate possible options to improve your business and develop the skills and knowledge to successfully support business change programmes within your organisation.

At the end of the course, you will be ready to take the **EXIN BCS Business Analysis Foundation exam**.

The development of IT was the impetus for creating information systems to improve business operations and management decision making. But with the growth of information systems, it soon became clear that business users did not adequately understand the technical limitations of programmers, nor would programmers and other IT personnel immediately understand business needs. This led to the development of the business analyst function that would act as the coordinator between the business users and the IT staff.

COURSE & LEARNING OBJECTIVES

During this course, you will gain a broad understanding of business analysis, including:

- The role and competencies of a Business Analyst
- Investigation techniques, including interviews, observations, workshops and prototyping
- How to categorize, analyze and manage stakeholders
- Gaining a good understanding of the business process model
- Making a business case, a financial case and assessing feasibility
- How to establish, document and model requirements
- Be prepared to take the EXIN BCS Business Analysis Foundation exam on Day 3
